Bot 1 (pmus) Structural Remediation & 12-Agent Verification Report

Date: October 26, 2026

Branch: pmus-rebuild

Verification Suite: 529 passed in 8.19s (0 failed)

1. $59.00 USDC Cash Increase Provenance (13:59 CT / 18:59 UTC)

The $59 cash jump on October 26 was not an external bank deposit. It came from three on-chain USDC inflows into proxy wallet 0xacde6b44ed91cb334fbef01d03ef3fc4db0ca8f4:

- 13:59:11 CT **($21.50 USDC)**: Manual UI SELL exit of 59.99 shares of Will Tyreek Hill sign with the Kansas City Chiefs in 2026? across 3 price levels (5.00 @ $0.370, 5.00 @ $0.360, 49.99 @ $0.357).
- 13:59:09 CT **($29.10 USDC)**: Manual UI SELL exit of 55.00 shares of Will no next Israeli Minister of Justice be appointed by February 28, 2027? across 2 price levels (5.00 @ $0.540, 50.00 @ $0.528).
- Combined 13:59 CT liquidation proceeds: $50.60 **USDC**.
- **Earlier Intraday Inflows ($12.05 USDC)**: $2.05 from a 5-share Tyreek Hill sell at 13:33 CT (@ $0.410) plus $10.00 USDC from the daily LIP liquidity reward payout at 00:00:58 UTC.

2. Recovery of Deleted Session & 12-Agent Architecture

When conversation bc168649-bfa8-4048-b042-2ef480e68497 was deleted, three /swarm workers (95c0b012, 5dd1d325, 200070e9) were still running in isolated git worktrees. Coordinator e736ba98-7d80-4604-90e0-f4ad74342fae re-attached all 3 live workers via send_message and completed the 12-agent execution pipeline:

- **Agent 1 (95c0b012) — Swarm Worker 1**: Unit 1 (pmus/ledger.py, pmus/notify.py, pmus/dashboard.py).
- **Agent 2 (5dd1d325) — Swarm Worker 2**: Unit 2 (pmus/models.py, pmus/clob_venue.py, pmus/strategy/fill_risk.py).
- **Agent 3 (200070e9) — Swarm Worker 3**: Unit 3 (pmus/strategy/condition_selector.py, pmus/strategy/lip_quoter.py, pmus/strategy/global_rewards.py, pmus/shadow.py).
- **Agent 4 (101b8f3a) — Arena Candidate A**: Unit 4 (pmus/engine.py, pmus/config.py, pmus/tests/test_engine.py) — Winner (24.3 / 25).
- **Agent 5 (bf436da9) — Arena Candidate B**: Unit 4 Runner-Up (23.8 / 25) — Contributed 5 surgical edge-case grafts.
- **Agent 6 (2dcb7d13) — Arena Cross-Judge**: Evaluated Candidates A and B across 5 weighted criteria.
- **Agent 7 (6dbcea9c) — Interrogate Reviewer A (pro)**: Correctness, Edge Cases & Code Quality audit.
- **Agent 8 (6d2304c3) — Interrogate Reviewer B (inherit)**: Architecture & Cross-Module Contracts audit.
- **Agent 9 (eb4dbebf) — Interrogate Reviewer C (flash)**: Risk, Security & Regression audit.
- **Agent 10 (4b26540c) — Cross-Model Decision Trail Auditor (flash)**: Audited decisions.tsv and operator checkpoints.
- **Agent 11 (a0c16480) — Reflect Judgment Reviewer (inherit)**: Extracted durable session pickup and sequential integration principles.
- **Agent 12 (bd0a8b6a) — Reflect Tooling & Divergent Reviewer (flash)**: Extracted Windows CRLF patch normalization and orphan-worker handoff diffs.

3. Remediated Structural Defects

- **Post-Fill Synthetic Pair Hedge Completion & Dynamic Leg Cap**: `allocate_conditions` and `_waterfill_conditions` enforce `max_leg_collateral`, cap post-fill opposite-leg hedges at `1.00 - filled_avg_price` down to `HEDGE_LEG_MIN_PRICE = $0.05` (with matching `$0.05` floor in `lip_quoter.desired_quotes`), and verify `p_yes + p_no <= $0.99`.
- **Hair-Trigger Stop-Unwind Abolished & 24h Loss Cooldown**: `LIQUID_STOP_UNWIND` requires `allow_stop_unwind=True` and a `>= 15%` drawdown from entry (`mid <= avg_price * 0.85`). Realized loss exits trigger an 86,400s (24h) cooldown on both sibling slugs and zero out active bid budgets immediately.
- **Redeemable $0.00 Loss Recognition & Risk-Stop Ordering**: `LiveEngine.tick()` evaluates `daily_loss_stop` before cash-shift reallocation, incorporates sibling-netted `_compute_redeemable_loss(live_positions)` (excluding `archived` positions and null `cur_price` values) inside `daily_loss_baseline` subtraction, and enforces `PMUS_DAILY_LOSS_BASELINE_DATE`.
- **Taker Multi-Maker VWAP & LIP Scoring Symmetry**: `parse_trade_fills` computes true matched notional across maker legs (including complement pricing `1.00 - maker_price` on cross-asset fills); `side_score` filters sub-`min_size` dust levels; `estimate_global_pair_score` strips own resting orders before computing `adjusted_mid`.
- **SQLite WAL Pruning, Webhook Concurrency & Fail-Closed Dashboard**: `Ledger` caches schema columns at init and prunes snapshots older than 7 days; `Notifier` bounds concurrency with `BoundedSemaphore(4)`, redacts webhook URLs/tokens in error logs, and reports `engine_state` and `mtm_equity`; `dashboard.check_password()` fails closed unless `PMUS_DASHBOARD_PASSWORD` or `PMUS_DASHBOARD_ALLOW_UNAUTH_LOCAL=1` is set.
